## Polk dsb1 soundbar subwoofer not working

How to fix some common issues with the Polk MagniFi soundbar model AM8111-A. Your device is on but it is not connecting Before you connect to the Bluetooth, you must pair it with your devices. Make sure your Bluetooth is turned on for both devices. To do this, go to "Settings" on your phone, and tap the "Bluetooth" option. You will see discoverable Bluetooth devices near you. Select the device name of your soundbar and click "Connect". After pairing successfully, you should see "Connected" below the device name. Your devices should stay paired until you turn off connection from either device. Try to connect the soundbar with another device's Bluetooth. Once you have tried connecting the bluetooth to other devices and still are unable to make the bluetooth connect, consider replacing the Bluetooth sensor with this guide. Your Polk MagniFi Soundbar is not turning on or is not staying on. Ensure the power adapter is plugged in and the charge light is on. If the light is not on, and the adapter is plugged in, the adapter is faulty. If you have another adapter on hand with the same voltage then test that one with the soundbar. If the other one works then use that one if possible. If this does not work follow this guide to replace the internal power adapter. Your soundbar is on and there is volume but you cannot change the volume. If the remote works but the buttons on the soundbar are not responsive, try cleaning the keys by removing them and cleaning under the key. Put the keys back in place following this guide and test the volume buttons. "You have checked that everything is plugged in and it should work but it still is not working." Your Polk MagniFi Soundbar is connected to the power but cannot be turned on. If the soundbar cannot be turned on, check the power cord connection, AC adapter, or the power on button. Troubleshoot all above options. If all of them work normally, there is a high possibility that the motherboard is broken. To fix this, replace the motherboard follow this guide. Your Soundbar successfully turned on but unable to perform any activity. Troubleshoot for Bluetooth connection and volume adjustment. If all functions failed to work, there is a high possibility that the motherboard is broken. Follow the link above to replace the motherboard. Follow this repair guide to taking off the power button. Be sure to clean the button and under the button to eliminate any residue that is causing the button to stick. You purchased your Polk Soundbar to give you that "theater-vibe" at home, not "sitting in your car" vibe. The Polk Soundbar is designed to elevate your entertainment experience. When it doesn't work, it can be frustrating. If your Polk Soundbar is not working, check the HDMI connection. Make sure the HDMI cable is in the correct port. To prevent the soundbar from connecting to other sources, use only the HDMI connection between the TV and the Polk Soundbar. If your Polk Soundbar is not working, we are here to help you figure out the problem and the solution. The solutions are simple and fairly quick to resolve themselves. Here are some suggestions to get you started. As the saying goes, "Expectation postponed makes the heart sick." When you get the Polk Soundbar home and set it up, only to find it doesn't work, the excitement of that night's movie quickly leaves you. All hope is not lost, though. If the Polk Soundbar is not working, check the audio settings on your television. Make sure the speakers on the TV are turned off. Use the soundbar remote to navigate to the audio setting indicated on your tv. Check the HDMI Cable HDMI cables wear down over time. If your HDMI cable is several years old, it may be time to replace it. As HDMI cables age, they are no longer able to support the bandwidth needed for digital audio. If your television was manufactured before 2008, it may not have the HDMI Digital Output port. You will need to use the red and white analog cables for the Soundbar to work. Match the cables to the corresponding color on the back of your TV and your Soundbar. Check TV Speaker Settings Audio settings within the tv allow you to turn the internal speakers on or off. To check your TV's speaker settings, follow these steps: Step 1: In the main menu, go to Settings. Step 2: Open Sound settings. Step 3: Open Sound Adjustments. Step 4: Open Sound Mode. This will open preset audio profiles. Step 5: Select your Sound Mode. The Standard setting is a good choice for getting started and should resolve this issue. If you want to experiment with the different sound settings, proceed to step 6. Step 6: Open Advanced Settings. This setting provides additional sound controls, such as: Common Settings - Offers controls for regularly used settings, such as turning automatic volume leveling on or off and adjusting the right-left balance of the stereo speakers.Input Sound Settings - Gives you settings that apply to specific digital audio formats. It also allows you to match volume levels from your device and the tv.Sound Mode Related Settings - You can adjust the level of surround sound coming from the tv or you can open the equalizer to manually adjust audio levels by frequency. Reset The Sound Settings If going through the above steps does not solve the problem, you can do a factory reset to work from a clean slate. Following the steps below will initiate a factory reset of your Polk Soundbar. Step 1: Open Sound Settings. Step 2: Go to Sound Adjustments. Step 3: Open Advanced Settings. Step 4: Click Reset. Step 5: Confirm reset. Contact The Manufacturer If, after trying the above suggestions you continue to experience issues with your Polk soundbar, you will need to contact the manufacturer. The problem is most likely a manufacturing defect or pre-existing hardware defect. Polk Soundbar Keeps Disconnecting Few things in life are as aggravating as when you are in the middle of a movie or a game and the sound disconnects. Before you threaten to return your Polk Soundbar, here are some suggestions to try and resolve the issue. If your Polk Soundbar keeps disconnecting, check the power source. If the electrical outlet is faulty or if the Soundbar plug is not securely inserted into the outlet, any movement of the power cord could cause the soundbar to lose power. Power Surge A bad storm or electrical work being done nearby can cause an electrical power surge. A power surge will cause your Polk Soundbar to go into Standby Mode. Reset your soundbar by simultaneously pressing and holding the Power button and Volume Down button on the soundbar for 10 seconds. Sleep Timer Activated on TV Another possibility is the audio settings on your tv. Check the settings on your tv to see if the sleep timer has accidentally been activated. You can navigate to that setting by going to Menu> Sound Settings > Response Time. Bluetooth Interference The simplest way to know if the reason your Polk Soundbar keeps disconnecting is if it only happens when you connect via Bluetooth. If this is the case, limit the number of Bluetooth connections when using the soundbar. Reset The Polk Soundbar Much like our cell phones or computers, sometimes the solution is the simplest - turn the device off and then on again. The Polk Soundbar may simply need a quick reset. To reset the soundbar: Step 1: Turn the soundbar off. Step 2: Simultaneously press and hold the "Microphone Mute" and Volume Down button. Step 3: Hold the buttons for 3 seconds. Step 3: Release the buttons when the light ring flashes blue. This light means the device is successfully rebooting. Step 4: When the light ring flashes orange, the soundbar is ready to be paired with your tv. Polk Soundbar Not Connecting To WiFi The beauty of the Polk Soundbar is that you can connect wirelessly to your tv. You no longer have to contend with wires everywhere. Or using strategically placed plants or picture frames to hide the wires. If the Polk Soundbar is not connecting to Wi-Fi, the problem could be a poor Wi-Fi signal. Make sure the Polk Soundbar and router are close to each other. Rebooting the router will also help with any connectivity issues. If restarting the router does not resolve the issue, the next step is to check your network connection. Make sure your tv and the Polk Soundbar are on the same Wi-Fi network. Polk Soundbar Not Connecting To TV It's hard to enjoy the full effect of the Polk Soundbar if it will not connect to the tv. If the Polk Soundbar is not working on your tv, make sure you have the correct audio settings selected on your tv. The soundbar may be connected, but the audio is not being routed thru the soundbar. Sound Settings It is recommended to use an HDMI cable to connect the Polk Soundbar to your tv. However, if you do not have an HDMI cable or if your tv or soundbar does not have an HDMI outlet, there are other options to try. Digital Optical or Digital Coaxial Digital optical or digital coaxial are big words for two different types of cables. The optical cable has a square connector and the coaxial cable has a circular cable. They attach to the port with the corresponding shape. Coaxial connections tend to produce better audio quality than optical connections. However, not all TVs support a digital coaxial connection. Depending on your tv, the solution is simple - try the digital optical cable. Check The HDMI Port If you regularly stream apps onto your TV, HDMI ARC will give you the best sound. To use this connection, do the following. Connect to HDMI ARC on your TV. Connect to HDMI OUT (TV ARC) on the Soundbar. Change source on the soundbar to D.IN. Setting."TV ARC" will appear on the Soundbar display. The TV will now transfer audio through the soundbar. Polk Soundbar Won't Connect To Bluetooth The Polk Soundbar not only elevates your movie experience but also your musical experience. By connecting the soundbar to Bluetooth you can play your favorite playlist directly from your phone. If the Polk Soundbar is not connecting to Bluetooth, make sure the Bluetooth signal is turned on. Switching between networks and different devices could cause the Bluetooth signal to be turned off. To pair the Polk Soundbar with Bluetooth, press Source on the remote or soundbar until the soundbar's display reads BT-> Wait-> BT Pairing. Faulty Bluetooth Sensor Another possibility is a faulty Bluetooth sensor in the Polk Soundbar. To test this possibility, try connecting the soundbar to a different device using the Bluetooth setting. If you are unable to connect the soundbar, the sensor is faulty and will need to be replaced. Polk Soundbar Not Connecting To Subwoofer What could elevate your home theater experience more than connecting the Polk Soundbar to a subwoofer? If the Polk Soundbar is not connecting to the subwoofer, make sure the soundbar and subwoofer are pairing. Here is how you pair the two devices. Step 1: Turn off the subwoofer. Step 2: Hold down the 'sync' button on the back of the soundbar until the LED lights start to blink Step 3: The devices should now be ready to pair. Once the subwoofer is turned on, the LED light should turn green to signal the devices have paired. If your Polk Soundbar is not working properly, check the settings on your tv. Make sure the audio settings are set to forward sound through the Soundbar and not your television set. You can check these settings by going to the main menu on your tv.
